

INTRODUCING CARLISLE PRO ACADEMY

NEW!

INDUSTRY-LEADING TRAINING FOR SPRAY FOAM APPLICATORS

The NEW Carlisle PRO Academy is a comprehensive training program for spray foam professionals where participants will sharpen installation techniques and gain valuable spray foam knowledge that will give them the support and confidence they need to perform any job no matter the condition.

OUR FREE CERTIFICATION PROGRAM OFFERS:

- Interactive online courses, exploring important topics such as the chemistry behind spray foam, equipment troubleshooting and jobsite safety.
- A personalized in-field spray evaluation conducted by a Carlisle Spray Foam Installation Technical Services Representative, right at your location.
- An optional 3-day state-of-the-art training program at our headquarters in Carlisle, PA where you can obtain our Carlisle Pro Advanced Applicator certification.

Advance your skills, enhance productivity, and increase safety in the field as a Carlisle PRO Applicator.

Our comprehensive applicator training is designed to help our certified applicators excel and encourages online and in-person learning. By completing our virtual courses and an in-field evaluation, applicators will learn about the impact different field conditions have on the job and how to overcome challenges to increase productivity and profitability.

“
Each component of this program was carefully designed with the applicator in mind; we want them to walk away with the confidence and know-how to perform their job efficiently and effectively. By supporting the professional development of our customers, we are elevating the industry as a whole—it’s a win-win.
”

— Steven Fries
Technical Services Manager, CSFI

OUR 3-PART TRAINING INCLUDES:

Part 1 – E-learning Modules

Carlisle PRO Academy participants take their first step towards becoming a certified Carlisle PRO Applicator by successfully completing eight online learning modules and passing a final course exam. To reduce downtime spent out of the field and support different learning styles, participants can take the course and test at their own speed via a phone, tablet or computer. Modules explore situational awareness, concentrating on the impact different field conditions have on spray foam equipment and how to overcome those challenges on the job.

Part 2 – In-field Evaluation

After passing the online final exam, a CSFI Technical Services Representative will go to your location to conduct a spray evaluation, assessing participants’ spray techniques and ensuring they know how to operate their equipment in the field. Once part 2 is completed you will receive your certification from Carlisle.

Part 3 – Advanced Certification in Carlisle, PA (optional)

The revolutionary 3-day Advanced Applicator Training offers new, hands-on experiences that take Carlisle PRO Academy participants to even greater heights. Our industry-leading program merges a state-of-the-art, lab-style classroom with interactive learning. In our advanced spray booth we have the ability to replicate different climates and jobsite conditions, helping you learn how to resolve any issue that comes your way on the job. You’ll also get advanced equipment training and lessons in troubleshooting, spray techniques, chemistry, building science, and more. Upon completion of the three-day intensive training, participants will earn a Carlisle PRO Advanced Applicator certification.

E-learning modules are open to all applicators free of charge. To be eligible for part 2 & 3 of our training, contractor and/or applicator must be in the process of becoming or a current purchasing Carlisle spray foam contractor.
